Cultivation Increases Bermuda Grass Yields

Oklahoma experiments have proved that disking the grass sod of bermuda lightly every other year will cause an increase in yield of about 26 per cent. The tests were made on a thin or poor stand of grass.

It was found that bormuda would respond to heavier disking than the common native grass. Tillage seemed to prevent the grasses from dying in the center of the clumps.

Telephone Wires Not Used by New System

Power Lines to Carry Voices in Rural Zones

A new telephone communications era has begun for the nation's farm families. Tests made in Arkansas and Alabama by the telephone, private power companies and the REA have proved the feasibility of "talking" over the same rural power lines

Claude Gregory, president of Craighead REA co-operative, Jonesboro, Ark., making one of first calls over the carrier current telephone.

which provide farmers with electric energy.

Outwardly, the new and old telephonic equipment looks very much alike. In the new system, however, speech is transmitted over power wires by means of a carrier wave of radio frequency produced by electronic tubes, located either in a small box adjacent to the telephone or attached directly to the instrument. A device called a "coupler," placed on a pole outside each telephone user's house, allows the carrier current to enter and leave the lines but prevents the power current from interfering with transmitting and receiving instruments.

Equipment, to change the high frequency current back to normal voice frequency, is located at a point on the power line where vocal messages are channeled over wires to the telephone central office. The new system, experiments on which were started by Bell laboratories and REA in 1938, is expected to "telephonically link" thousands of families who now reside along rural power lines but are too far off the beaten path to be reached by existing telephone lines. Approximately three million farms are now electrified and scores of others are being added daily.

New Plastic

Development of a new foamed plastic, so light that a woman can balance four cubic feet on the finger tips of one hand, and yet so strong that luggage made with it as a core will easily support a man's weight, has been announced. Called cellular cellulose acetate, the new plastic is envisioned for use as the strong, lightweight cores in airplane floor panels, tail assemblies and wing structures, and in refrigerators, luggage and sections of prefabricated houses. Lighter than cork, this new plastic combines insulation against heat and cold with its remarkable structural strength when bonded between two sheets of metal, wood or plastic.

Misses Odelle and Etta Ranson, of Lynchburg, spent the week-end with Mr. and Mrs. S. C. Ranson.

Mrs. Katie Allen is visiting Mr. and Mrs. Meade Crews.

Pastures Require Good Legume Stand

Lime and Fertilizer Essential to Success

Legumes are a "must" in any permanent pasture building program if good yields of high quality forage are to be obtained, according to Dr. R. Dodd of the Ohio Agricultural Experiment station.

The legumes not only provide the nitrogen for additional grass growth and greatly increase the yield, but they also increase the lime and protein content of pasture herbage," he pointed out.

Legume seedings, however, must first be limed and fertilized if permanent pasture growth is to be assured.

Describing tests made by the Ohio station, Professor Dodd said that in these trials legume seedings had failed regardless of the seeding method unless the soil first was limed and fertilized. In only about one trial in 10 did satisfactory stands result from seedings of Ladino and Louisiana white clover and lespedeza on disked pasture land in the absence of lime and fertilizer.

"Where seedings were made on sod without any soil preparation

More hay from limed, fertilized soil.

but with a top dressing of lime and 500 pounds of O-14-7 fertilizer," he declared, "the greatest degree of success was obtained when seedings were made early in the spring and where the grass had been weakened by very close grazing the preceding fall or winter. The percentage of successes was more than double those obtained following seed-bed preparation but without treatment.

"Where treatment and disking were combined, the percentage of successes was again doubled. It is therefore recommended that the land be first limed as needed, then disked, fertilized and seeded."

British Develop Food Yeast as Diet Supplement

The Germans had used yeast in World War I to supplement protein and by 1941 the British had developed a type on a commercial scale. For palatability they selected the yeast scientifically known as Torula utilis. In the West Indies a place was found where it could be grown economically on waste molasses.

Food yeast has less energy value than dried eggs, wheat or whole milk powder. But Torula utilis depends for its nutritional value not on calories but on its enormous concentration of protein and vitamins. In this respect only liver eclipses yeast. Though yeast is deficient in methionine, an essential amino acid, its supplementary value is equal to that of milk proteins when added to a diet consisting mainly of cereals. Calcium salts and cod-liver oil must also be given to avoid rickets.

Experiments made in England prove that yeast can be added to soups, gravies, rissoles and even to bread. Pupils of a village school in Oxfordshire put on more weight with a yeast diet than did a control group.

You can add to your income by cutting pulpwood.

MARTIN - SCHUTT

Miss Edythe Virginia Schutt became the bride of Charles W. Martin in a ceremony that took place at 11 A. M. Saturday, April 20, at the Petersburg Highland Methodist parsonage. Dr. O. B. Newton, pastor of the church, performed the ceremony. The bride wore a beige two-piece dress with black accessories, and an orchid. She is the daughter of Mr. and Mrs. Herman H. Schutt, of Petersburg.

The bridegroom is the son of Mrs. Drucie Martin and the late Mr. C. E. Martin, of Spout Spring, Va. Both the bride and bridegroom are graduates of the Appomattox High School, and he is now with the N. and W. Railway, after four years in the European theatre of war.

After a wedding trip to Baltimore and Washington they will return to Petrsburg to make their home.

Mr. and Mrs. Herman H. Schutt, Mrs. Jesse E. Tolley, sister of the bride, and Mrs. Willie Smith, of Appomattox, witnessed the ceremony.

ENGAGEMENT IS ANNOUNCED

MISS MARIAN JUNE EVANS

Mr. and Mrs. S. J. Evans announce the engagement of their daughter, Marian June, to Edward Almond, son of Mr. and Mrs. L. K. Almond, of Pumpkin, Va. No date has been set for the wedding.

JENNINGS - SHEETS

Miss Charlotte Sheets, daughter of Mrs. James L. Sheets and the late Mr. Sheets of Clifton Forge, Virginia, became the bride of J. Newton Jenningsson of Mrs. Ruth H. Jennings and the late Mr. Jennings, of Appomattox, Virginia, on April 18.

The wedding took place in Central Methodist Church with the Rev. James A. Johnson, pastor of the church, officiating. The ceremony was performed in the presence of relatives and close friends of the couple.

The bride, who was unattended, wore a street length dress of aqua crepe with black accessories. Her corsage was of gardenias. For traveling she wore a brown wool suit with matching accessories.

Immediately after the ceremony the couple left for a wedding trip. Upon their return, the bride will complete the year's work as principal of Selma School, Alleghany County, where she has taught for several years.

The groom, who served with the armed forces for four years, has returned to civilian life. He is now employed by the Agricultural Adjustment Agency in Appomattox, where the couple will make their home.

Adequate Rations Needed To Build Up Colts

Too little and too late won't do when it comes to feeding young animals—not if the animals are to mature as they should. Scientists of the department of agriculture prove the point by experimental results, including a recent seven-year study with horses.

At the department's range livestock experiment station in Montana, Thoroughbreds, Belgians and Morgans were bred to obtain foals of light, draft and intermediate type. Under a system of management such as is often used in the range country, the foals were born about May, weaned when about six months old while on pasture with their mothers, and then kept on range pasture until five years old. As weanlings, they got an adequate ration of hay and grain throughout the first winter, but afterwards just pasture.

The colts grew normally during the first year and a half. Beginning the following winter, however, when they had to depend on the range they lost weight. The next summer they put on weight again and grew in size. In the winter they lost again. The same fluctuations occurred in the fourth and fifth years. There was a definite tendency for this method of management to produce horses that matured at sizes and weights considerably below normal for full-fed animals of the same breeding.

Meat Losses

Approximately 20 per cent of all cattle and hogs marketed are so bruised as to cause loss. Such injuries result in condemned cuts of the carcass after animals are dressed at the packing houses. Eighty per cent of the injuries in hogs, for example, are found to be in the hams and loins, which are the most valuable cuts. Of an annual total of 202,000,000 pounds of meat lost after the animals leave the farm, diseased animals account for 120,500,000 pounds, bruising losses 34,000,000 pounds, crippling 10,000,000 pounds, and dead animals 31,500,000 pounds.

BRUCE - HUDSON

Mr. and Mrs. M. L. Hudson, of Evergreen, announce the marriage of their only daughter, Reba Nadel Hudson, to Emile Thurman Bruce, only son of Allen T. Bruce, of Port Royal,Virginia. The wedding took place in the home of the bride's parents Saturday, April 20, at 2:30 o'clock. Rev. C. G. Carter, pastor of the Evergreen Baptist Church, officiated, using the single ring ceremony.

The bride was attired in an aqua wool suit with matching accessories, with orchids as her bouquet.

Carl had for her attendants Mrs. Gladys Cralle as matron of honor and Miss Dorothy Robertson. She has a clerical position with the government in Washington, D. C.

Mr. Bruce was attended by W. G. Johnson as best man, and Gordon Robertson. He is in the U. S. Navy and has seen active service in the recent war, with ribbons for good conduct and meritorious service.

Present at the wedding were: Mr. and Mrs. W. G. Johnson and little daughter, Linda, of Arlington, Va.; Mr. and Mrs. P. M. Robertson, Dorothy Robertson, Gordon Robertson, all of Quico City, Va. Mr. and Mrs. M. C. Crute, Gladys and Emma Crute and G.C. Crute, of Cullen; Mrs. S. T. Shelton and Gordon Shelton, of Red Oak, Va.; Mrs. Cecil G. Carter, Mrs. Hodge and Mr. and Mrs. M. L. Hudson, of Evergreen.
